RELEASE NOTES

OmniAccess

Release: Version 1.2, April 2021.
© 2021 Malvern Panalytical B.V. All rights reserved.

Thank you for using Malvern Panalytical's OmniAccess.

1   Introduction

OmniAccess is one of the modules of the OmniTrust software solution that is used for administration of the system and configuring user authentication and authorization.

2   System requirements

The requirements with respect to operating systems, applications, computer hardware and other system aspects are described in the OmniAccess installation notes.

3   Differences between versions

3.1   Differences between versions 1.1 and 1.0

OmniAccess 1.1 includes the following new features:

- Graphical user interface to edit authentication, synchronization, and signing & reason configurations.
- Wizard screen to setup initial permissions and options.
- Authorizations report.
- Manual audit entry.

3.2   Differences between versions 1.2 and 1.1

OmniAccess 1.2 includes the following new features:

- Import and export of all configuration types: authentication, synchronization, signing and reason and authorizations.
- Support for the use of default roles.
- Several user interface improvements.

4   Remarks and known issues

4.1   External files

- When you move configuration files from one computer to another, some compatibility issues may arise. Please check the Help "Configuration > Software overview > Backup existing configurations" for further details.

4.2   Single Sign-on

- When Single Sign-on is enabled for Windows Local or Windows Domain, and you have another authentication source configured (Malvern Panalytical User Store or Active Directory), Single Sign-on will automatically be disabled and will always ask for the Username and Password.

4.3   Server name in client synchronization configuration

- Currently a server name is not supported in the client synchronization configuration. An IP address must always be provided.
